

- FRESH AIR VENTILATION
- HIGH ENERGY EFFICIENCY

AIR-TO-AIR HEAT EXCHANGER

The units for heat recovery use the waste heat to condition the supply air. So the demand for the air conditioner can be decreased and the condition inside the room becomes better. At the same time the energy consumption for heating or cooling of the air can be reduced to up to 75%.

- 9 sizes with air-volume of 150 to 2000 m³/h available
- Recovery up to 75% of the energy of the waste air
- Increasing of the energy efficiency, particularly during the cold or hot season
